**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 – 11, 25 – 35, 26 and 38, drawn to a scalable infrastructure for multicast messaging on an overlay network, involving restricting message dissemination, classified in class 709, subclass 243.
  - II. Claims 13 - 17, drawn to assigning node names based to a multicast infrastructure based on information from a certificate authority, classified in class 709, subclass 226.
  - III. Claims 18 –24 and 37, drawn to forming multiple multicast trees and ensuring message reliability in said trees by routing messages based on network traffic levels, classified in class 709, subclass 235.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable.

In the instant case, subcombination II has separate utility such as insuring network sites are given the appropriate names based on information from a global certificate authority. Subcombination II, unlike subcombination I, thus could be used to ensure network naming has been implemented appropriately.

Subcombination III has separate utility such as controlling traffic levels by utilizing different network paths based on current network traffic, and thus could be used to ensure network traffic levels are kept balanced, something subcombination I could not do.

Subcombination III could further be used to balance network traffic levels in a network where network naming accuracy was immaterial. In contrast, in this scenario subcombination II could only determine the accuracy of network naming, and could not perform traffic balancing functions. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
